

Can I include additional information for other MIxS parameters on my template?

Short Answer

Yes, if you have collected information related to other MIxS parameters that are not mentioned on our [template](#) you can include them so they will be available in your ENA record.

Detailed Answer

Please also have a look [here](#) to get to know other optional parameters for each MIxS environmental package.

If your data is part of or funded by a third-party project, it is recommended to include some background information on the project (e.g. name, acronym, funding agency, grant number) as part of MIxS. This information also complies as a great name for your 'project name' parameter.
